

# Thioplast™ Polysulfides –

Resistive polymers for high-performance coatings & adhesives

Dr. Christian Probst

Thioplast 

Nouryon

# Thioplast™ Polysulfide Polymers

## What are liquid polysulfide polymers?

- Liquid polysulfide polymers are versatile pre-polymer resins with water to honey-like viscosity
- Polysulfide polymers are available...
  - As SH-terminated grades (Thioplast™ **G** family)
  - As epoxy-terminated grades (Thioplast™ **EPS** family)
- Cured polysulfide polymers feature...
  - High chemical resistivity
  - Excellent gas barrier properties / low permeability
  - High weather resistance
  - (Low-temperature) flexibility
  - Crack-bridging ability

# Thioplast™ Polysulfides in coatings – How Thioplast™ G helps to protect

# Thioplast™ in specialty coatings

Application example: protective coatings

- Thioplast™ Polysulfides are used in high-performance coatings in demanding environments
- Here: protective cable coating for steel girder bridges
- Key benefits from Thioplast™ in this application: **Durability increased and maintenance costs lowered** by improved corrosion resistance, flexibility, weathering resistance (water, UV light) and crack-bridging-ability

Hong Kong-Zhuhai-Macao Bridge. Cables protected with Thioplast™ polysulfides.

## Xingkang Bridge

**55,000 meters long**

= 20 times longer than the Golden Gate Bridge in San Francisco

**420,000 metric tons**

of steel was used in the construction  
- enough to build 60 Eiffel Towers

**Thioplast G**  
helps cables and other components resist corrosion

Red coating

Bundles

Main cable

**Thioplast G**

Sealant cover

Glue

150 cables

Bundle

Main cable = 175 bundles  
Each bundle = 150 cables

**280 meters high**

= 2 times higher than the Great Pyramid of Giza

**34,000 cables**

used in the construction - If laid in a single line, they would go around earth 1.5 times (60,000 km)

Hong Kong-Zhuhai-Macau Bridge

# Thioplast™ EPS – Introducing the all new „Thioplast™ EPS35“

# Thioplast™ Polysulfide Polymers

Thioplast™ EPS product family

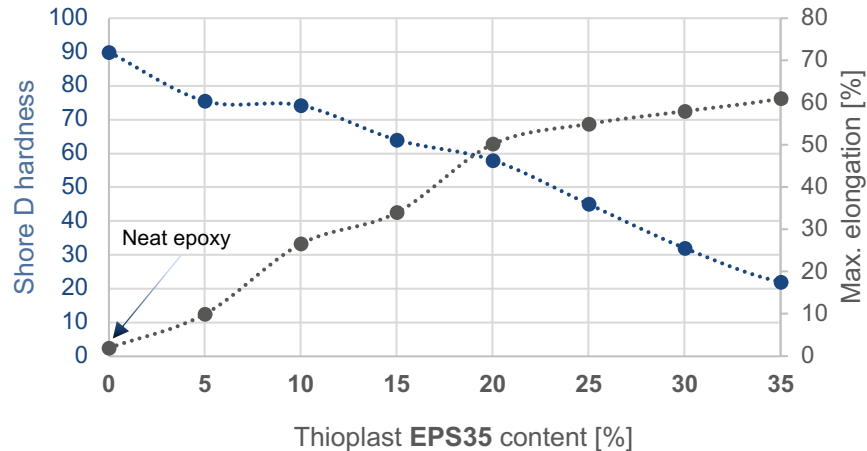

- **Epoxy end groups** No mercaptan odor; Amine- or anhydride curable; Miscible with all standard epoxy resins
- **Hybrid polymer** Epoxy-terminated Thioplast™ EPS polymers are hybrids that ideally combine chemical and physical performance of polysulfides with the strengths of epoxy resins
- **Aromatic / aliphatic** Aromatic grade - EPS70 - for quick curing indoor applications; aliphatic grades - EPS25 & EPS35 - for outdoor applications
- **New & better** The recently commercialized, best performing EPS grade, “Thioplast™ EPS35” is now available in China, Europe & USA!

Thioplast™ EPS35 provides flexibility, low-temperature impact resistance, shear strength and chemical resistance for epoxy-based coatings and adhesives - in one product.

# Thioplast™ EPS35

## Flexibility

- Thioplast™ EPS35's aliphatic polymer structure enables chain flexibility in the cured epoxy network
  - Shore hardness and elongation become adjustable to coatings and adhesives applications
- Epoxy coatings & adhesives become more flexible

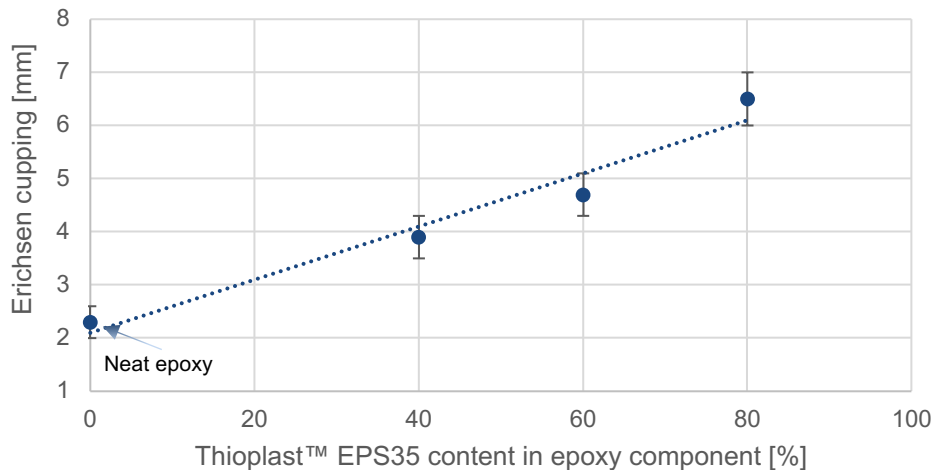

Epoxy/EPS blend in picture contains 50 % Thioplast™ EPS35.

# Thioplast™ EPS35

## Crack resistance

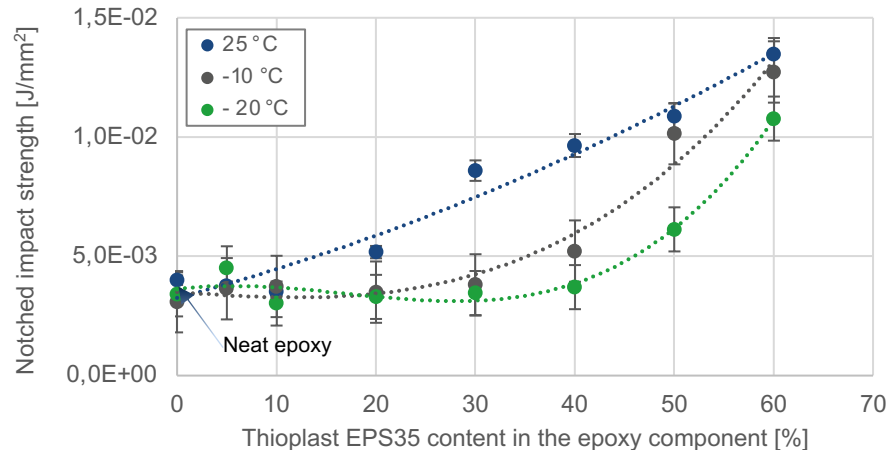

- Thioplast™ EPS35's flexible polymer backbone makes brittle epoxies softer
- Crack resistance can efficiently be improved
- Epoxy coatings become tougher

# Thioplast™ EPS35

## Low-temperature impact resistance

- The flexible polymer structure of Thioplast™ EPS35 leads to a drastically improved impact resistivity of epoxy coatings
- Durability is improved and maintenance is lowered
- Epoxy coatings become better in low-temperature conditions

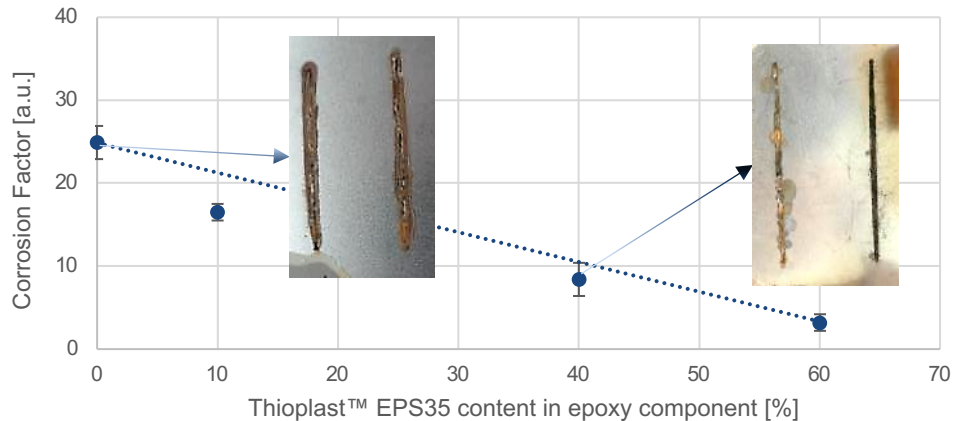

Potential application in low-temp. flexible and chemically resistant coatings.

# Thioplast™ EPS35

## Anti-corrosion properties

- Thioplast™ EPS35 increases the adhesion to metal and concrete
- At the same time, flexibility and wettability are increased
- Anti-corrosion properties of epoxides are improved
- Epoxy coatings become more resistive to offshore conditions

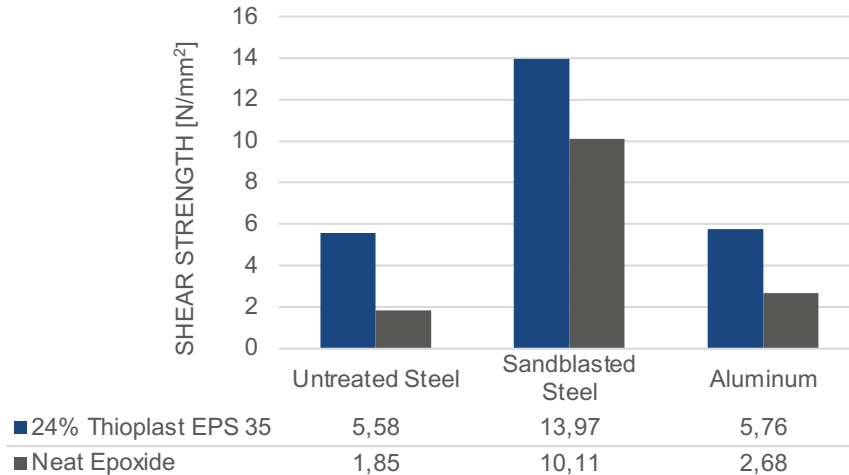

Potential application in corrosion resistant epoxy coatings.

# Thioplast™ EPS35

## Shear strength

- Even low amounts of Thioplast™ EPS35 improve the shear strength significantly and epoxy-based coatings and adhesive adhere better
- Epoxy-based coatings become more reliable

Thioplast™ EPS is used in structural adhesives for the automotive industry.

# Thioplast™ EPS35

## Chemical resistivity

- The sulfur in the polymer backbone increases the chemical resistivity of epoxides
- Epoxy-based coatings become more resilient
